

Vidyo for Emergency Preparedness

What are Your Needs?

- Are you able to bring together your teams to build, review and assess emergency response plans on an ongoing basis?
- Are you able to easily conduct training that involves all necessary agencies?
- Can you bring in expert consultants on a regular basis to aid in your planning?
- Can you easily conduct ad hoc meetings based on need?

During public emergencies, government agencies are on the front lines serving the community. To maintain operational continuity and provide essential services means that every responding organisation must have a plan and be fully prepared to carry it out, working in concert with other responders. Planning takes time, requires substantial interagency collaboration and costs money to maintain in a state of readiness at all times.

At Issue

The need to connect all relevant agencies and organisations in order to coordinate response and recovery services

The need to plan for the continuity of operations and to meet regularly to review and update plans and procedures

The need to facilitate training and education and ensure that all necessary personnel are well-versed in established plans and procedures

The Vidyo Solution

Connect all agencies in the planning process while reducing the need for travel. Vidyo means easily scheduled meetings, increased attendance, and the ability to conduct ad hoc, emergency meetings in which data, documents and reports are easily shared.

With Vidyo, agencies can bring in remote experts from anywhere in the country to assist with plan development, review and updates. Meetings can be recorded for later access. Learning from others and sharing best practices can strengthen emergency response plans.

Vidyo provides an efficient platform for video collaboration so all responders can work together without having to leave their normal base of operations. Training can be extended more readily to all the necessary participants, with more frequency if needed, while reducing associated meeting time and cost.
